Note: Unlike the data in Table 8-1, which are based on the underlying cause of death, the specific substance in the above table are identified using ICD-10 T-codes. The sum of all identified T-codes for substances (2,405) is greater than the combined number of (1,345) drug-related deaths (803) deaths that had drug poisoning assigned as the underlying cause + 542 that had drug poisoning assigned as the other than the underlying cause. It may not be possible to identify the specific underlying causal agent in deaths involving multiple drugs.
